

Question #5 (Medium)

Description:

Write a JavaScript function named `isPalindrome` that checks if a given string is a palindrome. A palindrome is a word, phrase, number, or other sequences of characters that reads the same forward and backward (ignoring spaces, punctuation, and capitalization). The function should return `true` if the input string is a palindrome and `false` otherwise.

Starting Code

```
function isPalindrome(str) {  
    // Your code here  
}
```

Sample Input

```
isPalindrome("A man, a plan, a canal, Panama");
```

Sample Output

```
true
```
