Description:

Write a JavaScript function named findUniqueCharacters that takes a string as input and returns a string containing only the unique characters from the input, in the order they first appeared. A character is considered unique if it appears exactly once in the input string.

Starting Code

```javascript
function findUniqueCharacters(str) {
    // Your code here
}
```

Sample Input

```javascript
findUniqueCharacters("bubble");
```

Sample Output

```javascript
"ule"
```
